

VACTAGON

Advantages of Finned Tubular Heaters

Safety

- With finned tubular elements, the risk of shock hazard is eliminated from accidental contact with the heater element
- Finned tubular elements can be used with most air contaminants including moisture
- Vactagon heaters have an inline filter to prevent flammable materials from entering the heater
- All heaters are insulated to prevent accident burns or ignition of items left on the surfaces of the heater
- Automatic thermal shutdown of unit at 260 degrees Fahrenheit
- Finned tubular elements are robust for transport, enclosed in stainless steel tubes and there are no ceramic spacers to break, which can cause elements to arc out
- Finned tubular elements are better for dissipation of heat. Hot spots can cause element failures
